

Jeremy is a software developer and information technology leader with a strong background in the healthcare industry. He has experience leading teams in the development and maintenance of various systems, including claims processing, real-time communications between providers and payers, and business intelligence platforms. Currently, he oversees a team responsible for gathering, deidentifying, and delivering over 10TB of healthcare data to clients across multiple industries, with a primary focus on pharmaceuticals.

Jeremy has expertise in Microsoft .Net, BizTalk, Azure Logic Apps, Angular, Hadoop, Spark, and Databricks. He earned his Bachelor of Science in eBusiness from Southern University in Baton Rouge, Louisiana, and completed the Executive MBA program at Southeastern Louisiana University.
